All KERN's Formwork are developed with the highest level of performance present on the market and all solutions are bespoke designed according to project requirements with no limits of customization thanks to the strength of our Entineering.

The formwork system is hydraulically operated by PLC or remote device.

The setting-up and striking phases are managed by an innovative automated locking system which guarantees an outstanding level of Health & Safety for operatives.

The brand new innovative automated contrete casting system K-ONE combines the flexibility and efficiency of having a complete integrated system.
